ELECTRIC TRACTORS

This tractor series, which we have been manufacturing for over ten years, is continuously upgraded and improved. Thousands of these machines have been produced and are still on the market.

Its success stems from its ability to deal with the many different requirements of the industrial handling sector.

These tractors can work both indoors and outdoors thanks to the different versions available: with tyres or superelastic wheels, with or without cab. So many optionals have been added to these machines over the years that now, almost everything has already been designed and is available.

Both BULL 2, with its 2-ton towing capacity and BULL 4, with its 4-ton towing capacity, are three-wheel tractors able to cover medium distances and feature an electronic system that monitors both acceleration and regenerative braking. Besides being extremely convenient, this type of braking system safeguards the brakes, which last longer and provide a better performance.

BULL 2 BULL 4 CAB

CHASSIS: in electric arc welded tubular steel forming a rigid bearing structure.

DRIVE UNIT: comprises a differential specifically designed for reliable and silent operation and a long-lasting, high-performance motor.

DRIVER'S POSITION: designed to provide an optimum level of comfort, includes a generously sized seat and storage compartment. The dashboard features an instrument that signals the battery charge status and hours worked. Large steering wheel. Accelerator pedal and brake pedal. Steering system: mechanical reduction. Precise yet light. Controls the front wheel at an angle allowing the machine to reverse within a very small space.

WHEELS: three, with good size tyres. Superelastic rubber tyres on request, guaranteeing long life and wheel grip without foregoing driver comfort. No-marking wheels are available on request.

ELECTRIC SYSTEM: comprising an electronic control unit and closed remote control switches. Provides excellent control over movements. Designed to prevent operating faults, it functions during both acceleration and braking, which is regenerative. Automatic electric parking brake.

SAFETY DEVICES: the machine conforms to the accident prevention regulations in force as to components, performance and stability.
